MISSION STATEMENT

First of all, kudos for reading this. Most people would glance at a wall of text and gloss over it. I'm Everett, a results-driven professional with 13+ years of experience across consumer, enterprise, film & VFX, & games — I excel at turning cross-disciplinary, ambitious ideas into reality and ensuring projects cross the finish line. Once described as 'a one man wrecking crew', when I'm not shipping, I'm in the hangar working on planes or in the cockpit flying. Let's talk how I can make your goals a reality as soon as (but no earlier than) tomorrow!

EDUCATION

University of Southern California

2018 - 2019

BASc, PHYSICS & COMPUTER SCIENCE

Dual major across USC Dornsife & Viterbi: physics, computer science, and mathematics coursework spanning both schools' engineering and interdisciplinary programs.

Armstrong State University

2016 - 2018

AS, ENGINEERING

Engineering studies with a heavy math focus. Conducted research on elliptic-curve cryptography over finite fields, presented at math conferences, and active in ACM.

LANGUAGE

English

NATIVE SPEAKER

Japanese

INTERMEDIATE

Spanish

ELEMENTARY

Programming

NATIVE SPEAKER

SKILLS

C, C++, and C#

Python & ML

React (JS), Flutter (Dart)

Node.js, TypeScript

Unreal Engine 4 and 5

Unity and Source Engine

TensorFlow, PyTorch

Embedded Systems

Full Stack Development

Large Data Pipelines

Multiplatform Applications

UI Design & Development

Game Development

Virtual Reality (XR)

iOS & Android Development

FLAGSHIP PROJECTS

NihonDojo

2025

<https://nihondojo.ai/>

Full-stack Japanese learning app: AI sentence generation with real-time formality switching, on-device neural TTS (ONNX), FSRS spaced repetition, offline-first sync. Flutter + Supabase + SQLite, solo-shipped.

LidarAGL

2026

<https://novabox.works/>

Open-source embedded avionics for experimental aircraft: ESP32-S3 + micro-lidar sensor fusion, real-time audio DSP for spoken AGL callouts and flare guidance. Bare-metal C++, designed, built & flight-tested on my own airplane.

RECENT WORK

Senior Full Stack Engineer

2025 - PRESENT

KEEPER SECURITY

- Built C++ native node modules bridging Electron to OS-level APIs
- Engineered zero-knowledge security features in TypeScript & React
- Shipped multi-platform biometrics to 4m+ users globally

Senior Software Engineer

2024 - 2025

SKYDANCE INTERACTIVE

- Shipped full-stack UIs for Behemoth, a 2x D.I.C.E.-nominated VR title
- Created VR gameplay features in UE5 & C++ for Oculus Quest.
- Designed and deployed server backends, multiplayer, and data sync.

Senior Pipeline Engineer

2023 - 2024

NETFLIX - EYELINE STUDIOS

- Shipped virtual production tech for \$100M+ blockbuster films & TV
- Built Unreal Engine workflows for the world's largest VP LED stage
- Engineered synthetic data pipelines to train proprietary ML models

Senior Full Stack Engineer

2022 - 2023

BLACK BOX VR

- Built full-stack VR fitness platform in Unity/C# with live hardware
- Migrated critical backend microservices to AWS serverless (JS/TS)
- Shipped XR gameplay bridging software, hardware & cloud services

Software Engineering Lead

2019 - 2021

DMG ENTERTAINMENT

- Led all engineering on two Transformers VR titles (Unreal & Unity)
- Shipped & ran live-service LBE attractions on-site in Shanghai
- Built localized multiplayer, backend servers & operator apps

SEE CV FOR FULL EMPLOYMENT HISTORY... THERE IS MUCH MORE!
